

## AMENDMENTS TO THE SPECIFICATION

Responsive to the objections to the drawings, please amend and replace the following paragraph starting on line 24 of page 9:

The four hour remaining time period is displayed on the display 48 (FIG. 3) according to block 66 and then reduced proportionally with additional operation of the vehicle. If the vehicle is completely or partially recharged, the controller adjusts the available operation time shown in display 48 according to the battery measurement after the charge session. If the vehicle skips one of the one hour breaks, the controller 22 also readjusts the predicted operation time.
